 your equipment or
 your business.***

***If it's got to be lifted,
 do it the easy way, with
 a Backsaver Crane.***

- Available with manual brake winch or electric winch (12 volt or 240 volt)
- 360 degree mechanical slewing by means of a worm drive gear
- Economical alternative to expensive hydraulic mounted cranes
- Suitable for trucks, utilities and trailers
- Suitable for Industrial, marine and rural applications
- Powder Coated finish

JARRETT BACKSAVER CRANES

CAPACITIES: 300kg and 500kg

Jarrett Backsaver Cranes are general purpose stationary cranes and have many applications within industrial, engineering and mining sites. Located on the back of commercial vehicles they are suitable for loading and unloading goods. Other applications for the Jarrett Backsaver Crane include marina and agricultural environments, and small trade businesses.

The Backsaver Crane has the capacity to safely, simply and effectively lift and place loads of up to 300kg and 500kg.

The Backsaver is fitted with a 360 degree mechanical slewing by means of a worm drive gear. This eliminates the danger of the crane boom swinging out of control when the load is taken up. The boom can only be rotated (slewed) by operating the slewing control handle.
