

CONTAINER PRODUCTS

Containers around the globe, whether docked in ports or in transit, should be properly secured. Twistlocks are devices that are primarily incorporated to join and lock containers vertically and/or horizontally and are vital for safely securing containers for transportation.

With heavy-duty strength and durability, twist locks and twist lock components help to properly lock shipping containers in place for transport. Manufactured from high-quality cast iron and galvanised steel, our twist locks can stand up to daily use and maintain their integrity for years despite tough jobs and harsh weather conditions.

PART NO.	DESCRIPTION	TENSION B.L (t)	LC (t)	SHEAR B.L (t)
